# Graduating to globalisation 

Dilek Demirbas Ila Patnaik Ajay Shah

March 26, 2008

## The new phenomenon of outbound FDI by Indian firms

- Outbound FDI by Indian firms has risen rapidly in recent years, starting from near-zero levels
- A surprising phenomenon. We normally expect capital to flow from rich countries to poor countries.
- What is going on?

## Preview our key findings

- Understanding the behaviour of firms is of essence in illuminating this macroeconomic phenomenon
- Models of exporting at the firm level are intimately linked to models of outbound FDI at the firm level.
- There is a hierarchy where some firms graduate to globalisation with exporting, and an intensification of these very firm characteristics induces outbound FDI.

## Conceptual framework

Backdrop New Trade Theory perspective on firms and internationalisation.
Helpman, Melitz, Yeaple (2003) : a firm can serve foreign markets through export or outbound FDI. In equilibrium, only the more productive firms export, and the most productive firms do outbound FDI.
Head \& Ries (2003) : HMY predictions can be reversed if the foreign country is a low-cost production venue. No such risk in India.

## A firm and foreign customers

Four cases;
D Domestic firm
DX Domestic production + exports
DXI Domestic production, exports and outbound FDI
DI Domestic production + outbound FDI

## The D firm (domestic only)

| Firm | Gross_Value_Added |
| :--- | ---: |
| Container Corpn. Of India Ltd. | 952.11 |
| Shipping Corpn. Of India Ltd. | 1369.06 |
| Neyveli Lignite Corpn. Ltd. | 1438.89 |
| Chennai Petroleum Corpn. Ltd. | 1464.16 |
| Unitech Ltd. | 1475.02 |
| Mahanagar Telephone Nigam Ltd. | 2803.76 |
| N M D C Ltd. | 3393.02 |
| G A I L (India) Ltd. | 3559.67 |
| Power Grid Corpn. Of India Ltd. | 3727.95 |
| N T P C Ltd. | 11549.00 |

- Probably shielded from globalisation by staying in non-tradeables
- Probably a low-productivity firm that does not have an edge in the global market.

## The DX firm (domestic + export)

| Firm | Gross_Value_Added |
| :--- | ---: |
| I T C Ltd. | 4990.62 |
| Bharat Petroleum Corpn. Ltd. | 5049.45 |
| Reliance Communications Ltd. | 5399.74 |
| Bharat Heavy Electricals Ltd. | 5648.65 |
| Hindustan Zinc Ltd. | 6841.52 |
| Bharti Airtel Ltd. | 8383.78 |
| Steel Authority Of India Ltd. | 15304.77 |
| Indian Oil Corpn. Ltd. | 16457.74 |
| Reliance Industries Ltd. | 22562.97 |
| Oil \& Natural Gas Corpn. Ltd. | 33091.63 |

- Productive enough to sell to foreign markets
- Low wages in India + high costs of transportation
- Productivity advantage large enough to overcome costs of transportation

## The DXI firm (domestic + export + outbound FDI)

| Firm | Gross_Value_Added |
| :--- | ---: |
| H C L Technologies Ltd. | 2072.97 |
| Mahindra \& Mahindra Ltd. | 2276.12 |
| Grasim Industries Ltd. | 3077.70 |
| Larsen \& Toubro Ltd. | 3472.00 |
| Tata Motors Ltd. | 4201.54 |
| Satyam Computer Services Ltd. | 5277.01 |
| Tata Steel Ltd. | 8804.57 |
| Wipro Ltd. | 9339.30 |
| Infosys Technologies Ltd. | 10737.88 |
| Tata Consultancy Services Ltd. | 11870.35 |

- Productive enough to sell to foreign markets
- Low wages in India + high costs of transportation
- High fixed costs of setting up FDI abroad are overcome by high productivity differential.

## The DI firm (domestic + outbound FDI)

| Firm | Gross_Value_Added |
| :--- | ---: |
| Chowgule Steamships Ltd. | 27.93 |
| Reliance Industrial Infrastructure Ltd. | 32.24 |
| Venus Remedies Ltd. | 44.19 |
| Sical Logistics Ltd. | 91.13 |
| Berger Paints India Ltd. | 192.46 |
| Balmer Lawrie \& Co. Ltd. | 193.98 |
| Kansai Nerolac Paints Ltd. | 254.29 |
| Asian Paints Ltd. | 638.11 |
| United Spirits Ltd. | 639.71 |
| Reliance Energy Ltd. | 972.84 |

- Non-traded sectors; unable to export
- But is a high productivity firm and jumps to serving foreign markets.

## Our dataset

- CMIE Cospi index: all firms with trading frequency of over 66\% over the last six months.
- We take all non-financial firms which are in this index in March 2008.
- We track them from 1997-98 till 2006-07-10 years of data. Firm-years with sales or assets below Rs. 10 million are dropped.
- This yields unbalanced panel data.
- In 2006-07, these firms have \$0.5 trillion in total assets (50\% of GDP) and have exports of $\$ 87$ billion ( $37 \%$ of total exports of goods and services).

## Part I

## Describing the phenomenon

## Aggregate exports by these firms (billion rupees)

| Year | Exports | Sales | X/S $(\%)$ |
| ---: | ---: | ---: | ---: |
| 1998 | 500.32 | 5086.97 | 9.84 |
| 1999 | 515.42 | 5635.61 | 9.15 |
| 2000 | 589.94 | 6699.18 | 8.81 |
| 2001 | 756.78 | 7804.03 | 9.70 |
| 2002 | 830.22 | 8051.02 | 10.31 |
| 2003 | 1031.67 | 9154.18 | 11.27 |
| 2004 | 1298.39 | 10526.68 | 12.33 |
| 2005 | 1977.22 | 13181.95 | 15.00 |
| 2006 | 2431.55 | 15793.82 | 15.40 |
| 2007 | 3476.69 | 20114.06 | 17.28 |

From $\$ 12$ billion to $\$ 87$ billion of exports.

## Count of exporting firms

|  | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| FALSE | 657 | 697 | 765 | 747 | 748 | 746 | 770 | 759 | 766 | 698 |
| TRUE | 960 | 1006 | 1036 | 1096 | 1101 | 1175 | 1212 | 1254 | 1309 | 1320 |

## Outbound FDI by some well-known firms (billion rupees)

|  | Tata Tea | Ranbaxy | Tata Stee | Infosys |
| ---: | ---: | ---: | ---: | ---: |
| 1998 | 0.00 | 0.00 | 0.00 | 0.00 |
| 1999 | 0.00 | 2.36 | 0.00 | 0.00 |
| 2000 | 0.00 | 2.33 | 0.00 | 0.00 |
| 2001 | 4.41 | 2.66 | 0.00 | 0.00 |
| 2002 | 5.07 | 2.33 | 0.02 | 0.67 |
| 2003 | 5.07 | 2.33 | 0.02 | 0.54 |
| 2004 | 5.12 | 2.33 | 0.03 | 1.01 |
| 2005 | 5.01 | 5.73 | 1.52 | 1.50 |
| 2006 | 5.12 | 6.62 | 9.73 | 1.81 |
| 2007 | 14.28 | 25.59 | 10.46 | 2.13 |

## These same examples, expressed as percent of total assets

|  | Tata Tea | Ranbaxy | Tata Steel | Infosys |
| ---: | ---: | ---: | ---: | ---: |
| 1998 | 0.00 | 0.00 | 0.00 | 0.00 |
| 1999 | 0.00 | 10.81 | 0.00 | 0.00 |
| 2000 | 0.00 | 10.41 | 0.00 | 0.00 |
| 2001 | 32.94 | 11.13 | 0.00 | 0.00 |
| 2002 | 35.63 | 9.24 | 0.01 | 2.63 |
| 2003 | 34.43 | 8.14 | 0.01 | 1.51 |
| 2004 | 35.75 | 6.36 | 0.02 | 2.03 |
| 2005 | 32.53 | 13.52 | 0.91 | 2.28 |
| 2006 | 30.06 | 13.65 | 5.05 | 1.99 |
| 2007 | 52.43 | 36.14 | 3.26 | 1.64 |

## Aggregate foreign assets in dataset (billion rupees)

| Year | For. inv. | Total Assets | FI/TA (\%) |
| ---: | ---: | ---: | ---: |
| 1998 | 0.56 | 6526.31 | 0.01 |
| 1999 | 3.42 | 7136.94 | 0.05 |
| 2000 | 8.74 | 7712.96 | 0.11 |
| 2001 | 82.18 | 8426.56 | 0.98 |
| 2002 | 105.02 | 9190.19 | 1.14 |
| 2003 | 127.48 | 10230.08 | 1.25 |
| 2004 | 123.66 | 11451.36 | 1.08 |
| 2005 | 165.45 | 13438.72 | 1.23 |
| 2006 | 245.06 | 16267.77 | 1.51 |
| 2007 | 387.87 | 20790.48 | 1.87 |

From 0 to $\$ 10$ billion.

## Count of FDI firms

|  | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| FALSE | 1615 | 1699 | 1774 | 1750 | 1707 | 1758 | 1792 | 1793 | 1820 | 1747 |
| TRUE | 2 | 4 | 27 | 93 | 142 | 163 | 190 | 220 | 255 | 271 |

## Defining categorical variables

- We define "an exporting firm" as one with over $1 \%$ of sales as exports.
- We define "an outbound FDI firm" as one where overseas assets exceed 1\% of total assets.
- Using this, we get four categories:
(1) Neither: D
(2) Exporting only: DX
(3) Exporting and outbound FDI]: DXI
(4) Outbound FDI but not export: DI

## Counts of firms in the four categories

|  | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| D | 656 | 696 | 761 | 741 | 735 | 730 | 750 | 735 | 744 | 677 |
| DI | 1 | 1 | 4 | 6 | 13 | 16 | 20 | 24 | 22 | 21 |
| DX | 959 | 1003 | 1013 | 1009 | 972 | 1028 | 1042 | 1058 | 1076 | 1070 |
| DXI | 1 | 3 | 23 | 87 | 129 | 147 | 170 | 196 | 233 | 250 |
| Sum | 1617 | 1703 | 1801 | 1843 | 1849 | 1921 | 1982 | 2013 | 2075 | 2018 |

## Counts of firms in the four categories

|  | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| D | 656 | 696 | 761 | 741 | 735 | 730 | 750 | 735 | 744 | 677 |
| DI | 1 | 1 | 4 | 6 | 13 | 16 | 20 | 24 | 22 | 21 |
| DX | 959 | 1003 | 1013 | 1009 | 972 | 1028 | 1042 | 1058 | 1076 | 1070 |
| DXI | 1 | 3 | 23 | 87 | 129 | 147 | 170 | 196 | 233 | 250 |
| Sum | 1617 | 1703 | 1801 | 1843 | 1849 | 1921 | 1982 | 2013 | 2075 | 2018 |

There are just 21 DI firms.
This is consistent with the notion that there is a hierarchy from D to DX to DXI; it's hard for D firms to jump to DI.
From here on, we drop the DI firms.

## Transition probabilities from category at time $t$ to category at time $t+1$

|  | D | DX | DXI |
| ---: | ---: | ---: | ---: |
| D | 86.45 | 13.33 | 0.23 |
| DX | 7.08 | 89.62 | 3.30 |
| DXI | 0.32 | 8.47 | 91.22 |

## Transition probabilities from category at time $t$ to category at time $t+1$

|  | D | DX | DXI |
| ---: | ---: | ---: | ---: |
| D | 86.45 | 13.33 | 0.23 |
| DX | 7.08 | 89.62 | 3.30 |
| DXI | 0.32 | 8.47 | 91.22 |

Firms don't seem to fluctuate around; there's an 86 / 90 / 91 percent chance of staying in a given state. Jumping from D to DXI is only $0.23 \%$

## Part II

## Describing the three categories (D DX DXI)

## Median total assets

## Median sales

## Median output in each group

## R\&D expenses to sales

## Output per assets

## Leverage

## Summarising broad patterns

(1) Total assets: $\mathrm{DXI}>\mathrm{DX}>\mathrm{D}$
(2) Sales: $\mathrm{DXI}>\mathrm{DX}>\mathrm{D}$
(3) Output: DXI > DX > D
(9) R\&D expenses to sales ratio: $\mathrm{DXI}>\mathrm{DX}>\mathrm{D}$
(0) Output per unit assets: DXI >D $>\mathrm{D}$
(1) Leverage: DX > D > DXI
(Debt market has shunned dynamic sectors, and sectors with less tangible assets as collateral, but it's getting a bit better).

## Part III

## Explaining the D - DX - DXI progression

## A model that expresses this hierarchy

- Could do a bivariate probit model: one equation for export and another for outbound FDI.
- But this misses the hierarchy

## Ordered probit

$y^{*}$ is unobserved, and there are cutoffs $\tau_{1}$ and $\tau_{2}$ that determine what we observe:

$$
\begin{aligned}
y^{*} & =\beta^{\prime} X+u \\
y & =\left\{\begin{array}{llll}
\mathbf{D} & \text { if } & y^{*}<\tau_{1} \\
\mathbf{D X} & \text { if } & \tau_{1} \leq & y^{*}<\tau_{2} \\
\mathbf{D X I} & \text { if } & \tau_{2} \leq & y^{*}
\end{array}\right.
\end{aligned}
$$

- Parameter vector estimated by MLE: $\theta=(\beta, \tau)$.
- $y^{*}=\beta^{\prime} X$ is a single propensity measure: big values induce exports and bigger values induce outbound FDI too.
- The data can reject the model by giving $\tau$ values which are smeared together.

## Careful handling of extreme values and nonlinearities

- Many accounting variables have extreme values. Example: Return on equity ranges from $-32900 \%$ to $118500 \%$.
- We do 'winsorisation': Clip the distribution to the (.01, .99) quantiles.
- Nonlinearities of response are prevalent.
- We use cubic orthogonal polynomials in the model.

## Estimates with full data

What matters in the model:

- Log total assets (4th degree)
- Year of incorporation (4th degree)
- Winsorised R\&D to sales ratio (4th degree)
- Gross value added (4th degree)
- Winsorised ratio of fixed assets to total assets (4th degree)
- A dummy variable for above median return on equity

## Distribution of the estimated cutoffs

Roughly speaking: A shift in $\beta^{\prime} X$ of 2 shifts a firm from the threshold of exporting to the threshold of outbound FDI.

## Response to total assets

## Response to gross value added

## Response to tangibility of assets (GFA/TA)

## Response to R\&D expenses to sales ratio (winsorised)

## Response to year of incorporation

## Summary of results

- R\&D expenses to sales matters: First, going from 0 to $2 \%$ helps, and then going beyond $5 \%$ helps.
- The most outward oriented firms have total assets between 10 and 100 billion rupees of total assets. Bigger firms (beyond Rs. 100 billion of assets) are actually less internationalised.
- Very old firms are more internationalised. The least international firms are those born between 1890 and 1960.
- These regressors look like productivity measures. To this extent, this supports the HMY model.

## Conclusion

- There is a link between the huge rise in India's exports and the huge rise in India's outbound FDI
- More productive firms appear to be driving both developments: more productive firms export and the most productive firms do outbound FDI.
- There appears to be a hierarchy where firms go from autarky to exporting to outbound FDI
- A unified model of both phenomena.
- Related to the literature on two-way links between trade liberalisation and capital account liberalisation.

## Thank you.
